# 1 Notes

## 1.1 General remarks

**Server**

- Demo server side is sufficient.
- TA advised to fix some bugs.
- Backlog and sprint need to be uploaded by Saturday (Example shown by David).

**Database**

- No suggestion by TA, completely your own choice.
- Everything is viable.
- Choice between PostgreSQL or MySQL.
- PostgreSQL has great cross platform capabilities.

**Maven**

- Maven checks your program in a clean environment. Maven will help with Checkstyle, which Intelij doesn't support.
- Eclipse does support Checkstyle (maybe use this for testing).

**Davis is on vacation this week, so he'll respond less. Still a deadline for Saturday.**

**Git conventions**

- Use alot of branches.
- No direct pushes to master.
- Gives alot of points in week 10.
- Keep everything in the POM if you merge (between two versions, pick the newest).

**Goals of this week**

- Implement Java Spring.
- Two last classes implement, Energy, Extra (Gyum)
- Will discuss more after the meeting.
